Subject: Hazard Ranking Score

Hi Jonathan:

In 2011, a site assessment was conducted for the Cement Creek drainage in preparation of a draft HRS Report. However, no report or associated HRS score was finalized at that time.

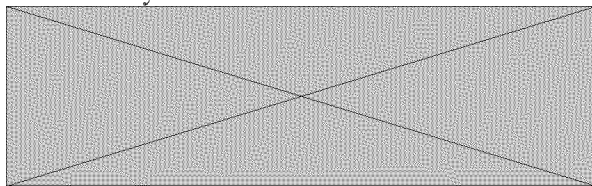

The actual score is considered deliberative until the rulemaking for the proposal is published, so the score associated with the draft 2011 ranking is not publicly available. Based on EPA's numerical model, sites can score between 0-100. Sites scoring above 28.5 are eligible for the National Priorities List (NPL). Given data and information on the numerous mines/mills draining into the Upper Animas, the site is expected to score above 28.5.

I hope this helps.

Warren
